# SAMHSA's WORKING DEFINITION OF RECOVERY: 10 GUIDING PRINCIPLES OF RECOVERY

## BACKGROUND

Recovery has been identified as a primary goal for behavioral health care. In August 2010, leaders in the behavioral health field, consisting of people in recovery from mental health and substance use problems and SAMHSA, met to explore the development of a common, unified working definition of recovery. Prior to this,

## DEFINITION

### Working definition of recovery from mental disorders and/or substance use disorders

A process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.

Through the Recovery Support Strategic Initiative, SAMHSA has delineated four major dimensions that support a life in recovery:

#### Health

Overcoming or managing one's disease(s) or symptoms—for example, abstaining from use of alcohol, illicit drugs, and non-prescribed medications if one has an addiction problem—and for everyone in recovery, making informed, healthy choices that support physical and emotional wellbeing.

#### Home

A stable and safe place to live

#### Purpose

Meaningful daily activities, such as a job, school, volunteerism, family caretaking, or creative endeavors, and the independence, income and resources to participate in society

#### Community

Relationships and social networks that provide support, friendship, love, and hope

## 10 GUIDING PRINCIPLES OF RECOVERY

Addresses Trauma

Strengths/Responsibility

Respect

## Recovery is holistic

Recovery encompasses an individual's whole life, including mind, body, spirit, and community. This includes addressing: self-care practices, family, housing, employment, transportation, education, clinical treatment for mental disorders and substance use disorders, services and supports, primary healthcare, dental care, complementary and alternative services, faith, spirituality, creativity, social networks, and community participation. The array of services and supports available should be integrated and coordinated.

## Recovery is supported by peers and allies

Mutual support and mutual aid groups, including the sharing of experiential knowledge and skills, as well as social learning, play an invaluable role in recovery. Peers encourage and engage other peers and provide each other with a vital sense of belonging, supportive relationships, valued roles, and community. Through helping others and giving back to the community, one helps one's self. Peer-operated supports and services provide important resources to assist people along their journeys of recovery and wellness. Professionals can also play an important role in the recovery process by providing clinical treatment and other services that support individuals in their chosen recovery paths. While peers and allies play an important role for many in recovery, their role for children and youth may be slightly different. Peer supports for families are very important for children with behavioral health problems and can also play a supportive role for youth in recovery.

## Recovery is supported through relationship and social networks

An important factor in the recovery process is the presence and involvement of people who believe in the person's ability to recover; who offer hope, support, and encouragement; and who also suggest strategies and resources for change. Family members, peers, providers, faith groups, community members, and other allies form vital support networks. Through these relationships, people leave unhealthy and/or unfulfilling life roles behind and engage in new roles (e.g., partner, caregiver, friend, student, employee) that lead to a greater sense

Services and supports should be trauma-informed to foster safety (physical and emotional) and trust, as well as promote choice, empowerment, and collaboration.

### **Recovery involves individual, family, and community strengths and responsibility**

Individuals, families, and communities have strengths and resources that serve as a foundation for recovery. In addition, individuals have a personal responsibility for their own self-care and journeys of recovery. Individuals should be supported in speaking for themselves. Families and significant others have responsibilities to support their loved ones, especially for children and youth in recovery. Communities have responsibilities to provide opportunities and resources to address discrimination and to foster social inclusion and recovery. Individuals in recovery also have a social responsibility and should have the ability to join with peers to speak collectively about their strengths, needs, wants, desires, and aspirations.

### **Recovery is based on respect**

Community, systems, and societal acceptance and appreciation for people affected by mental health and substance use problems—including protecting their rights and eliminating discrimination—are crucial in achieving recovery. There is a need to acknowledge that taking steps towards recovery may require great courage. Self-acceptance, developing a positive and meaningful sense of identity, and regaining belief in one's self are particularly important.

Drawing on research, practice, and personal experience of recovering individuals, within the context of health reform, SAMHSA will lead efforts to advance the understanding of recovery and ensure that vital recovery supports and services are available and accessible to all who need and want them.

Please see SAMHSA's Recovery Support Initiative (<http://www.samhsa.gov/recovery>) for more information on recovery.
