

Major Research Area Paper Presentation

*Analysis of Soft Tissue Tumors in MRIs: Case study
Soft Tissue Sarcomas*

*by
Hamidreza Farhidzadeh*

For the Ph.D. degree in Computer Science & Engineering

The machine learning and data mining methods have been utilized to develop computer-aided (CAD) system to analyze the biomedical imaging data and evolve new gates for extensive image guided diagnosis analysis. The goal of this paper is to review CAD systems which are used Magnetic Resonance Imaging (MRI) in the case of tumor development, especially Soft Tissue Sarcomas (STS). CAD systems need continuous and comprehensive endeavors to design and construct a model to be practical in course of tumor development and outcome prediction. In this paper, we try to consider the efforts have been done to quantify tumor radiology by applying machine learning models and also current techniques to tumor detection, segmentation and diagnosis prediction. In each section, several related approaches are explained.

Wednesday, November 18, 2015

3:00 P.M.

ENB 313

THE PUBLIC IS INVITED

Examining Committee

Dmitry Goldgof, Ph.D., Co-Major Professor

Lawrence Hall, Ph.D., Co-Major Professor

Rangachar Kasturi, Ph.D.

Richard Gitlin, Ph.D.

Jacob Scott, M.D.

*Srinivas Katkoori, Ph.D.
Graduate Program Director
Computer Science and Engineering
College of Engineering*

*Rafael Perez, Ph.D., Interim Chair
Computer Science and Engineering
College of Engineering*

*If you require a reasonable accommodation to participate, please contact the
Office of Diversity & Equal Opportunity at 813-974-4373 at least five (5) working days prior to the event.*
